

Candidate Instruments for a Universal Carbon Premiumt: The Commonwealth Cost of Carbon

Aidan T. Parkinson and Andreea M. Benu, 5 Colina Mews, London, N15 3HS

August 24, 2026

enquiries@aidantparkinson.com

Research highlights:

- A novel quantitative interpretation of the Hobbesian State of Nature to formulate a Commonwealth Cost of Carbon, as a candidate universal ecosystem performance observation.
- A demonstrative calculation of historical Commonwealth Costs of Carbon from the Hobbesian position.
- A novel quantitative Commonwealth Service Rating that may be used as a market indice to characterise local activities.
- A stable proposition for a new trade association to support the novel instruments, inspired by the works of John Rawls and Thomas Hobbes.
